CLIENT Urban Surfaces

TEST METHOD CONDUCTED ASTM F970 Standard Test Method for Static Load Limit

DESCRIPTION OF TEST SAMPLE

IDENTIFICATION Alamo Click
CONSTRUCTION Floating Floor Plank

GENERAL PRINCIPLE

This test determines the recovery properties of resilient floor covering after long term indentation test (24 hours) under a specified load.

PROCEDURE

The test sample is conditioned to equilibrium at 73° F and 50% relative humidity. The initial thickness of the sample is determined using a dial micrometer with a flat presser foot .250 inches in diameter. A specified load is applied to the sample over a 1.125 inch diameter indentor foot for 24 hours. After removal of the load, the sample is allowed to recover for 24 hours. The sample is regauged using the .250 inch diameter presser foot. The difference between the two measurements is reported as the residual compression.

TEST RESULTS

<table>
<thead>
<tr>
<th>SPECIFIED LOAD</th>
<th>RESIDUAL COMPRESSION</th>
</tr>
</thead>
<tbody>
<tr>
<td>250 psi</td>
<td>0.014 Inch*</td>
</tr>
<tr>
<td>2,000 psi</td>
<td>0.036 Inch*</td>
</tr>
</tbody>
</table>

*NOTE: Cushion heavily influenced the thickness loss.
