Laboratory Acoustical Test Report

FC23-0761

Impact Insulation Class and Sound Transmission Class

ASTM E492, E90

August 11, 2023

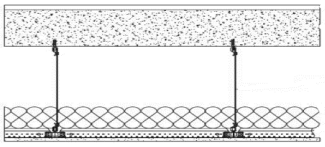
Test Assembly:

Urban Surfaces Studio 12 Luxury Vinyl Plank Flooring
Urban Surfaces Floor Silencer Boost Underlayment
6-inch 5000 PSI Concrete Slab
Armstrong HD8906 Drywall Main Beam
Armstrong XL8945P Cross Tee
Johns Manville Unfaced R-13 Fiberglass Insulation
National Gypsum Gold Bond Fire-Shield® Type X Gypsum Panel

IIC-66
HIIC-76
LIIC-68
STC-61

URBAN SURFACES
1121 Olympic Drive
Corona, California 92881

Impact Insulation Class Test FC23-0761: IIC 66



Finish Flooring	5 mm Urban Surfaces Studio 12 Luxury Vinyl Plank
Underlayment	6 mm Urban Surfaces Floor Silencer Boost Underlayment
Concrete Slab	152.4 mm 5000 PSI Concrete Slab
Drywall Main Beam	43 mm Armstrong HD8906 Drywall Main Beam
Cross Tee	37.3 mm Armstrong XL8945P Cross Tee
Fiberglass Insulation	88.9 mm Johns Manville Unfaced R-13 Fiberglass Insulation
Gypsum Panel	15.9 mm National Gypsum Gold Bond Fire-Shield® Type X Gypsum Panel

Test Date:	May 9, 2023	
Construction Date:	May 9, 2023	
Test Specimen Area:	11	sq.m.
Receiving Room Volume:	156	cu.m.

Background Affected

Flanking Affected

Background and Flanking Affected

1.0 TEST PROCEDURES

1.1 Impact Insulation Tests

All tests were conducted in accordance with ASTM E492, "Standard Test Method for Laboratory Measurement of Impact Sound Transmission through Floor-Ceiling Assemblies Using the Tapping Machine." The IIC is a single-number rating derived from the Impact Sound Pressure Level in accordance with ASTM E989, "Standard Classification for Determination of Impact Insulation Class (IIC)." Results are presented above.

95% confidence intervals represent uncertainty for microphone averaging, not tapping positions.

1.2 High-frequency Impact Insulation Class Tests

The HIIC is the High-frequency Impact Insulation Class and is meant to assess the high-frequency impact noise on a floor-ceiling assembly. The higher the value, the better the floor, meaning less noise from high-frequency impacts in the space below.

All tests were conducted in accordance with the requirements of ASTM E492, "Standard Test Method for Laboratory Measurement of Impact Sound Transmission through Floor-Ceiling Assemblies Using the Tapping Machine," using ASTM E3222 "Standard Classification for Determination of High-frequency Impact Sound Ratings" to calculate the High-frequency Impact Insulation Class (HIIC). Results are presented above.

1.3 Low-frequency Impact Insulation Class Tests

The LIIC is the Low-frequency Impact Insulation Class and is meant to assess the low-frequency impact noise on a floor-ceiling assembly. The higher the value, the better the floor, meaning less noise from low-frequency impacts in the space below.

All tests were conducted in accordance with the requirements of ASTM E492, "Standard Test Method for Laboratory Measurement of Impact Sound Transmission through Floor-Ceiling Assemblies Using the Tapping Machine," using ASTM E3207 "Standard Classification for Determination of Low-frequency Impact Noise Ratings" to calculate the Low-frequency Impact Insulation Class (LIIC).

Measured result is **LIIC-68.**

1.4 Transmission Loss Tests

All tests were conducted in accordance with ASTM E90, "Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions," using the single-direction method. STC is a single-number rating derived from measured values of Sound Transmission Loss through a test specimen in accordance with ASTM E413, "Classification for Rating Sound Insulation." Results are presented above.

2.0 TEST ASSEMBLY

2.1 Assembly Description

The test assembly consists of:

- 5 mm Urban Surfaces Studio 12 Luxury Vinyl Plank;
- 6 mm Urban Surfaces Floor Silencer Boost Underlayment
- 152.4 mm 5000 PSI Concrete Slab;
- 43 mm Armstrong HD8906 Drywall Main Beam
- 37.3 mm Armstrong XL8945P Cross Tee
- 88.9 mm Johns Manville Unfaced R-13 Fiberglass Insulation.
- 15.9 mm National Gypsum Gold Bond Fire-Shield® Type X Gypsum Panel

Total mass of the floor-ceiling assembly was 4290.3 kg, having an area density of 390.5kg/m^2). This represents the entire area, which was separated into quadrants for the test.

Product/Element	Thickness	Dimensions	Area	Area Density
Urban Surfaces Studio 12 Luxury Vinyl Plank;	5 mm	1219.2 mm x 177.8 mm	10.98 m^2	8.51 kg/m^2
Urban Surfaces Floor Silencer Boost	6 mm	609.6 mm x 914.4 mm	10.98 m^2	2.36 kg/m^2
5000 PSI Concrete Slab	152.4 mm	3023 mm x 3632 mm	10.98 m^2	366.18kg/m^2
Armstrong HD8906 Drywall Main Beam	43 mm	38.1 mm x 2870 mm	10.9 lin m	0.45 kg/m
Armstrong XL8945P Cross Tee	37.3 mm	38.3 mm x 1219 mm	27.2 lin m	0.45 kg/m
Johns Manville Unfaced R-13 Fiberglass Insulation	88.9 mm	609.6 mm x 2438 mm	10.98 m^2	1.32 kg/m^2
National Gypsum Gold Bond Fire-Shield® Type X Gypsum Panel	15.9 mm	3023 mm x 1219 mm	10.56 m^2	11.23 kg/m^2

2.2 Installation

The materials were installed in the following manner:

- Finish flooring: Loose laid.
- Underlayment: Loose laid.
- Concrete slab: Installed in a test frame flush to the source room. Mats of #5 reinforcing bars were placed 25.4 mm from both the top and bottom of the slab, with bars spaced on 305 mm centers in both directions. The test frame was isolated from the structure with a dense neoprene gasket. This slab was an existing assembly, reused. No noticeable shrinkage or cracking was visible.
- Drywall Main Beam: Twelve-gauge hanger wires were attached to the bottom side of the concrete at twelve locations and then to the main beams. The hanger wire was twisted around itself a minimum of three times within 76 mm creating a 305 mm plenum. The measured steel thickness was 0.5 mm.
- Cross Tee: Inserted into the main beams on 610 mm centers. The measured steel thickness was 0.5.
- Fiberglass Insulation: Loose laid onto the ceiling grid system.
- Gypsum Panel: Fastened with 25.4 mm fine thread drywall screws on 305 mm centers. Seams and perimeter sealed with Pecora AC-20® Acoustical Sealant and covered with pressure-sensitive tape.
- .

The assembly was constructed on May 9, 2023.

3.0 TESTING PROTOCOL

This report summarizes laboratory acoustical testing contracted by Veneklasen to be completed for URBAN SURFACES on Urban Surfaces Studio 12 Luxury Vinyl Plank over Urban Surfaces Floor Silencer Boost Underlayment and Concrete slab. The scope of the acoustical testing is for Impact Insulation Class (IIC), Low-frequency Impact Insulation Class (LIIC), High-frequency Impact Insulation Class (HIIC), and Sound Transmission Class (STC), in accordance with ASTM standards E492, E90.

The tests were conducted on May 9, 2023. Details of the tests are contained in this report. Testing was completed in strict accordance with the following standards:

- ASTM E90, "Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions"
- ASTM E413, “Classification for Rating Sound Insulation”
- ASTM E492, "Standard Test Method for Laboratory Measurement of Impact Sound Transmission through Floor-Ceiling Assemblies Using the Tapping Machine”
- ASTM E989, “Standard Classification for Determination of Impact Insulation Class (IIC)”
- ASTM E1332, “Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions”
- ASTM E2235, “Standard Test Method for Determination of Decay Rates for Use in Sound Insulation Test Methods”
- ASTM E3207, “Standard Classification for Determination of Low-frequency Impact Noise Ratings.”
- ASTM E3222, “Standard Classification for Determination of High-frequency Impact Sound Ratings.”

3.1 Equipment

Equipment list and information associated with this test, including calibration information, is included in the Appendix.

3.2 Accreditation and Reporting

Report must be distributed in its entirety except with written authorization from Veneklasen Associates. Test was conducted at IAS-accredited test facility; the full report is available upon request. Detailed test procedures, data for flanking limit tests, repeatability measurements, and reference specimen tests are available on request.

Veneklasen Associates provides no warranties, expressed or implied, regarding the structural integrity or fitness of these assemblies for a specific installation. Any advertising which utilizes this test report or test data must not imply product certification or endorsement by Veneklasen Associates, NVLAP, NIST or the U.S. Government.

Sincerely,
Veneklasen Associates, Inc.

John LoVerde, *FASA*
Principal
